Why Deep Cleaning is Critical

Fire Hazard

Grease buildup causes 20% of kitchen fires, per NFPA data.

Reduced Efficiency

A 1/16-inch grease coating cuts airflow by 30-50%.

Hygiene & Odor

Accumulations harbor bacteria and emit unpleasant odors.

Appliance Longevity

Regular cleaning extends chimney lifespan by 2-3 years.

The Science of Soot & Grease Buildup

Composition

A combustible mix of vaporized oils, carbon, and dust.

Adhesion

High temperatures polymerize grease onto metal surfaces.

Impact

It blocks filter pores and restricts motor ventilation.

Hidden Dangers

Severe obstruction can lead to carbon monoxide buildup.

Faber & Elica: Brand-Specific Cleaning Considerations

Faber

Features baffle filters that require specific dismantling and degreasing. Perimetric suction areas need precise cleaning.

Elica

Uses Heat Auto-Clean technology, but still requires manual removal of melted grease. Fan assembly needs deep cleaning.

Filter Types

Both use mesh and baffle filters. Mesh filters need frequent removal and pressure washing.

Motor Accessibility

Different motor designs require specific access protocols for thorough fan blade cleaning.
